# Benchmarking Risk Management

IT Sector

Dr Alicia Aitken  
Managing Director Human Systems International

# Topics for Discussion

- Who is Human Systems International
- HSI Benchmarking Trends
- Industry insights

# Who is HSI?

- Human Systems was established 1987 and has a global reach
- We are research based and link this to real-world delivery experience from our blue-chip clientele
- We address all industries and sectors and have over 20 years of comparative global data & metrics
- We know 'what good looks like' and understand why projects fail and organizations continue to under deliver
- We help organizations improve their project and program management delivery capability through assessment, benchmarking & sharing of best practice

The image is a dense collage of logos from various organizations, including governments, corporations, and public services. The logos are arranged in a grid-like fashion, filling the entire frame. Notable logos include BAE Systems, NHS, Thales, General Dynamics, Rolls-Royce, Siemens, Airbus, Bombardier, and NASA. The logos are of various sizes and colors, creating a vibrant and busy visual. The organizations represented include governments like the Australian Government, UK Government, and various state governments; corporations like BAE Systems, NHS, Thales, General Dynamics, Rolls-Royce, Siemens, Airbus, Bombardier, and NASA; and public services like the Department of Education and Early Childhood Development, HM Revenue & Customs, and the National Audit Office.

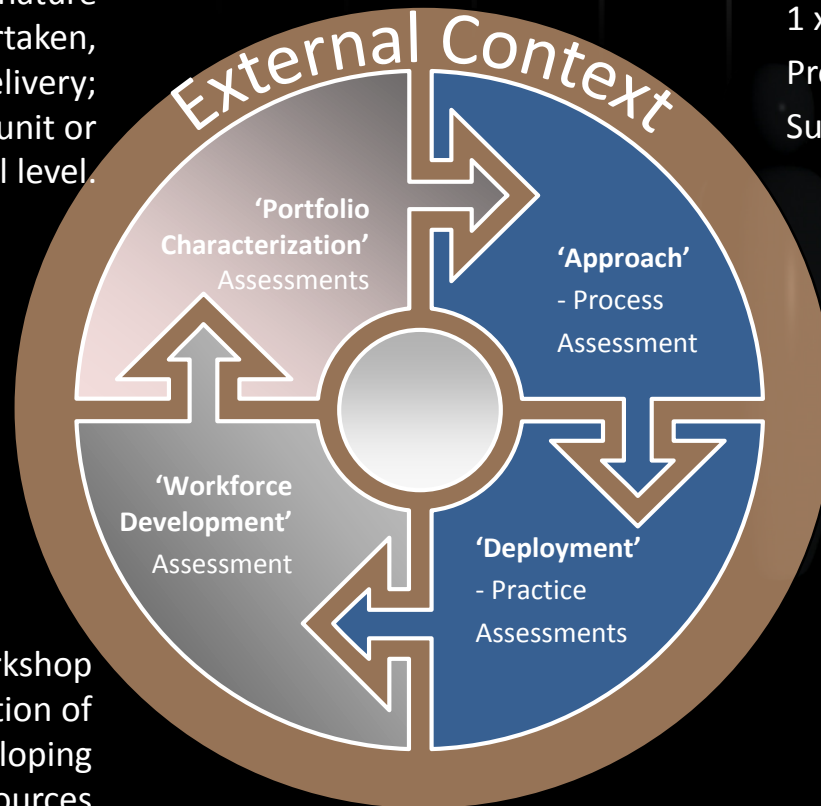

# 4Q – HSI PPPM Benchmarking

½ - working group session

Portfolio Characterization - of the nature and complexity of projects undertaken, and the degree of difficulty of delivery; conducted in multiple at business unit or divisional level.

1 x Desktop Audit & Workshop  
Workforce Development – evaluation of the corporate approach to developing PPPM resources

1 x Desktop Audit

Processes & Procedures

Supported by information gathered from the interviews with Key Personnel

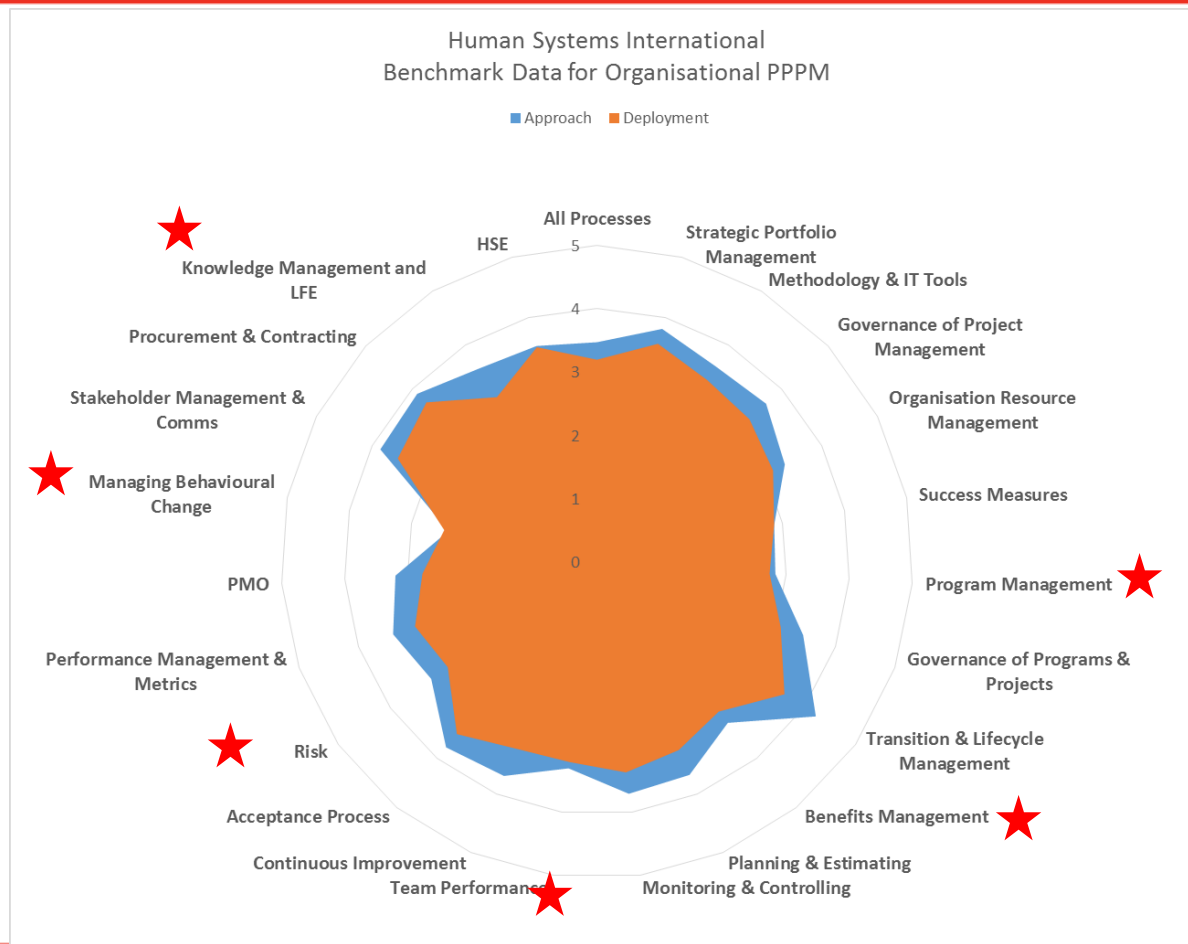

1 x Workshop

With Project Teams

# Are we getting better?

Trends Over Time

## Most Improved Approach Topics

- Continuous Improvement
- Strategic Portfolio Management
- Planning & Estimating

## Most Improved Deployment Topics

- Strategic Portfolio Management
- Organisation Resource Management
- Transition & Lifecycle Management
- Continuous Improvement
- Methodology & IT Tools
- Knowledge Management and LFE

Trends in Improvement

# What's Not Improving

## Least Improved Deployment Topics

- HSE
- Managing Behavioural Change
- Success Measures
- Program Management

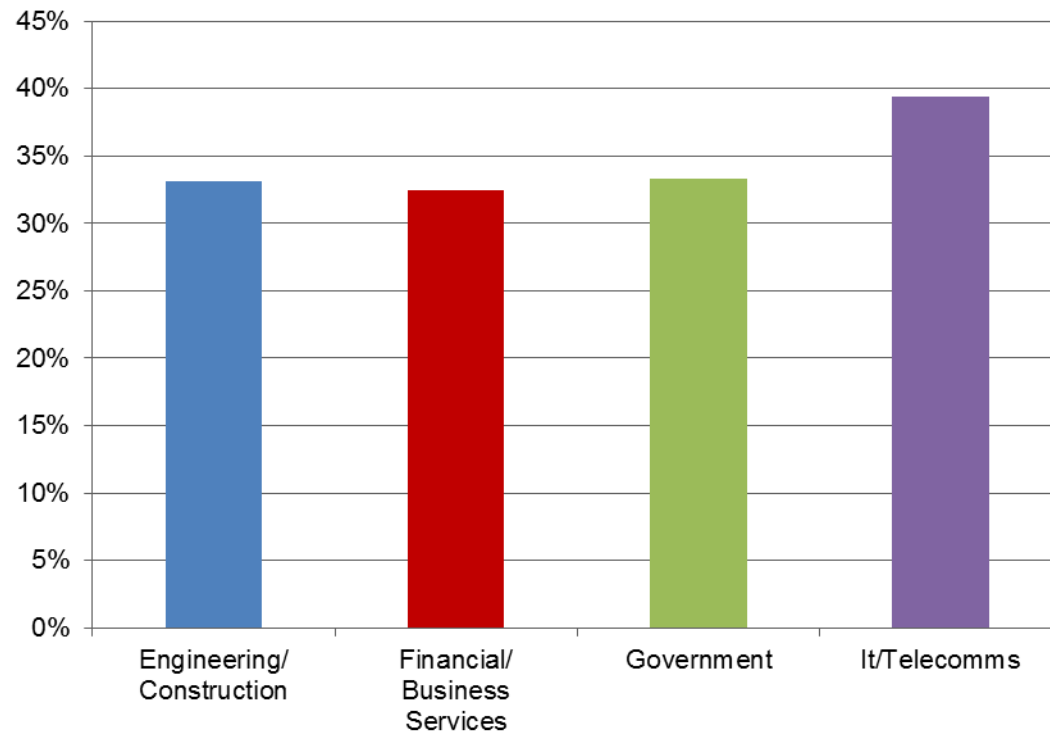

## Least Improved Approach Topics

- Program Management
- HSE
- Success Measures
- Managing Behavioural Change
- Team Performance
- Benefits Management
- Risk
- Stakeholder Management & Comms

# Industry sector differences

**Overall use of PM practices**

**Similar results overall**

**But different sets of practices in each sector**

**IT/Telecomms strongest overall**

# Sector differences

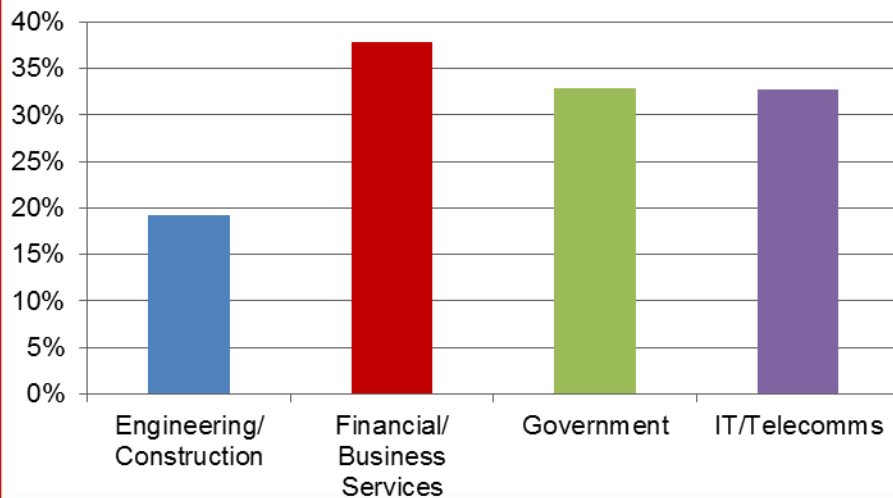

## Portfolio management

## Program management

## Benefits management

## Risk management

# Sector differences

## Contracts management

## Change control processes

## Project cost management

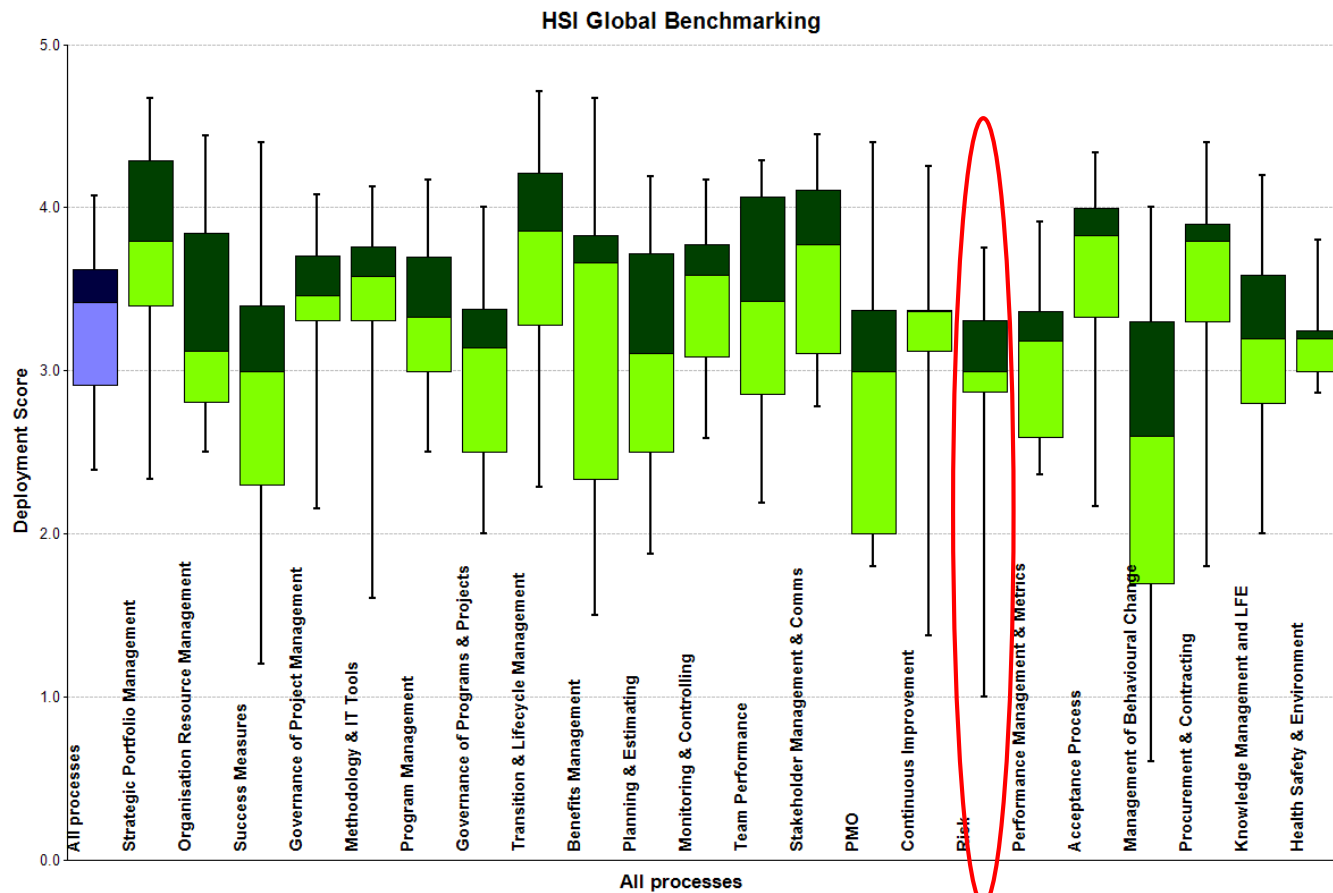

## Project time management

HSI Global Benchmarking - Risk

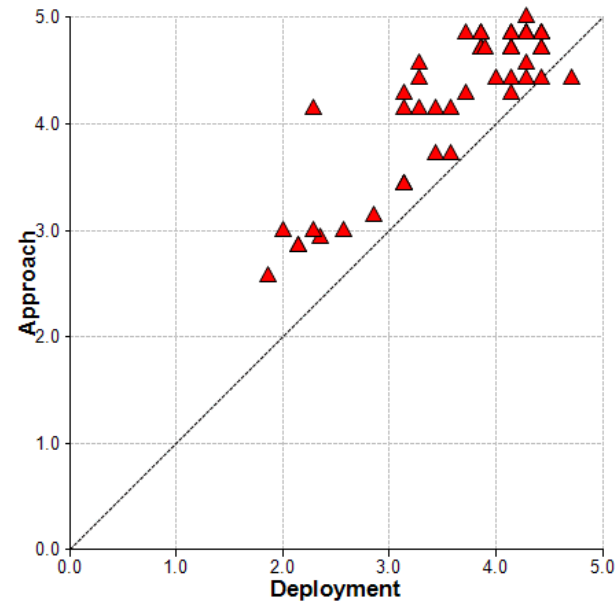

# By Comparison

HSI Global Benchmarking - Risk

HSI Global Benchmarking - Transition & Lifecycle Management

# The Good

- We're good at
  - Documenting the Process
  - Identification of Risks

# and The Bad

- Less good at
  - Actively Managing Risks
  - Opportunities
  - Reference Class Forecasting “outside look”

Too little	Too much
Risk logs completed at outset, then filed	Over analysis (potentially of the wrong risks)
No regular risk review	Risk management becomes “business prevention”
Under analysis of risk-related costs	Big project methods applied to the smallest initiative
No concept of opportunity	
Real risks never identified	

# Examples of Good Practice From the Network

# Risk management – Example

Effective risk management is a structured & iterative process that can help to decrease the impact & probability of negative events

Identify risks that may affect the project and document their characteristics. Earlier supply chain intervention

Prioritise identified risks by their potential impact/probability for further action. Stop the project in development

Track risks/mitigation actions and assess compliance with Track Actions to eliminate potential Issues.

Develop process and approaches / actions to reduce threats to project

Continuous review throughout the lifecycle of the project

# Defence Industry - Example

- Basic requirement is for projects to have a Risk and Opportunity Management process tailored to requirements of project and a regular reporting regime
- Best practice guidance is provided by Risk and Opportunity Management guides and handbooks
- Corporate Project Management Council sponsored corporate Risk Management Steering Group, which shares and promotes best practice project risk and opportunity management. The Group consists of expert representatives from across the business.
- Business areas tailor business and project specific procedures. Tailoring responsibilities are formally assigned to individuals; each business has a Project Management Authority.

# Why is Risk so Hard?

# Why is it that the risk that gets you is never on the risk log?

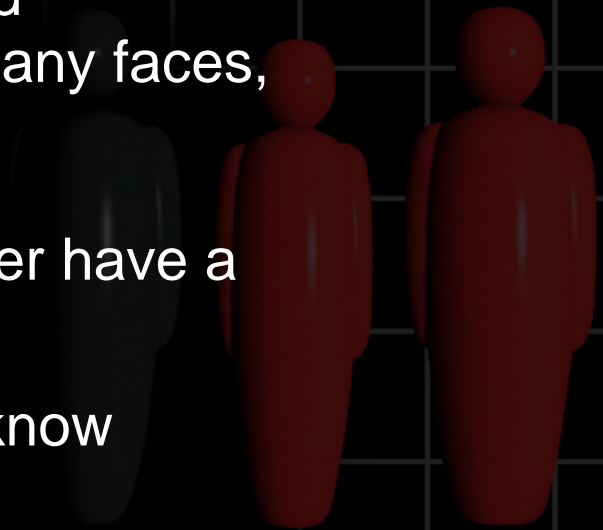

<http://www.flickr.com/photos/uscgd8/4542934710/>

# It's Culture Thing.....

## ■ McKinsey 2013 Study

- 15% of directors reported a very good understanding of the risks their company faces,
- 54% a good understanding,
- almost one third (29%) said they either have a limited or no understanding.
- The remaining 2% said they did not know

# Psychology of Risk

- Daniel Kahneman: Prospect Theory
- People value gains and losses differently
  - We base decisions on perceived gains rather than perceived losses
- Which would you rather
  - 50% chance of winning \$1000
  - 50% chance of losing \$1000

# Psychology of Risk Cont.

## ■ Optimism Bias

# Psychology of Risk Cont.

## ■ Normalisation of Deviance

# What Can You Do?

- Reframe risks in the positive to get buy in
- Use Reference Class Forecasting to gain the upper hand on Optimism Bias
- Challenge the norms – constantly check on behaviours to ensure complacency isn't putting your project at risk

# What is Emerging For Organisations ?

- Emergence of “The Positive Side of Risk”
- Complexity Rating
- Assurance of Risk at Gates

Human Systems
